## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 36-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 4,906,306 (Araki) in view of US 5,606,146 (Danen). Araki teaches disposing the first body and the second body (figure 1, items 1 and 2); pressing the bodies together each other (col. 10, ll. 20-47); where wherein at least one of the first and second bodies comprise metallic glass (col. 10, ll. 20-47) and explosion bonding (abstract). Danen teaches the use of a reactive multilayer foil comprising a plurality of successive exothermic reactive layers that react to form a joining material; and igniting the foil (col. 2, ll. 20-67); wherein the reactive multilayer foil comprises alternate layers of an alloy comprising Ni or Cu, an alloy comprising Ti, Zr, or Hf, and an alloy containing primarily Al (col. 5, ll. 5-35); where the reactive multilayer foil comprises alternate layers of alloys that, after reaction and cooling, are amorphous (col. 5, ll. 5-35). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the bonding process of Araki to utilize the claimed multilayer foil in order to bond the workpieces without a source of gas or heat (see Danen col. 1, ll. 14-30).
